Scientist Carries £70,000 Worth of Radium to London

Professor Soddy Sets New Record in Bringing Two Grammes From Czechoslovakia; Train Fired On

MANCHESTER, England, Nov. 6 (By Mail).—Two grammes of radium, the largest amount that ever has been transported, has been brought to England from Czechoslovakia by Professor Soddy, the radiologist of Oxford University, according to "The Manchester Guardian." The professor carried the precious mineral in a special package of lead three inches thick, which was wrapped in an official Foreign Office bag.

He told the story of his journey from Prague, in Czechoslovakia, where the radium was procured. "The radium has been acquired," he said, "by the Imperial Foreign Corporation of London, for whom I am scientific adviser. It has been secured by the corporation from the Czechoslovak state mines for a period of fifteen years. At the end of that time it may be returned to the people in this country, scientists and others who have special use for the radium."

"When the negotiations for the hiring of the radium were settled the director of the factory, Herr Hummel, and myself attended at the Ministry of Public Works, where the radium was opened out. I compared the nine tubes which contained the two grammes with the standard certificate. The whole of the material was then packed and sealed."

"Through the courtesy of the British Legation in Prague I was allowed to travel as a King's messenger, which accounts for my having the package in a Foreign Office bag. I was accompanied by my wife and my secretary, but had no escort. We never allowed the radium, which is valued at £70,000, out of our sight, although, had there been any attempt to steal it, the robbers would have had great difficulty in disposing of it."

"Our plans with regard to the radium, which is deposited in a safe in London, are uncertain. Probably I shall take it to Oxford, where I hope there will be an opportunity of establishing a research laboratory. I may say that reports that this laboratory has already been decided upon are quite unfounded."

An official of the Imperial Foreign Corporation, who met Professor Soddy

at Folkestone, stated that the two grammes of radium are the largest amount of pure radium that has ever been accumulated and transported.

"The corporation," he continued, "have acquired the right of the entire output of the Czechoslovakian mine, amounting to four grammes per annum, for fifteen years. There was keen competition, especially from the German government, to secure the concession, and the fact that when Professor Soddy's train was passing near Munich a bullet went through the forward part of his carriage may or may not have some significance."

The plans with regard to the radium brought to England are that it should be placed in the research laboratory, should one of the universities decide to establish one, and from there be let

at a price to various users. The present cost of hiring twenty-four curies (a term derived from the name of Mme. Curie, who discovered radium) is 6 gns. for twenty-four hours.

Reds Agitate Fiji Coolies

Indian Workers on Plantations Strike; Won't 'Salaam' Whites

SYDNEY, New South Wales, Sept. 26 (By Mail).—Fears that Bolshevism may take a hold upon the 80,000 East Indian coolies in the Fiji Islands, who have been imported over a period of years to work the sugar plantations, have been expressed by the Fiji Planters' Association, according to advices reaching here to-day.

The Indians have just carried out a

six-months' strike which paralyzed the sugar industry and caused heavy losses to the planters. They had presented demands that the planters characterized as "extravagant," and refused to grant. These demands, the planters declared, were the result of the efforts of agitators who are preaching that the Indian should not "salaam" a white person, and similar pronouncements of race equality. Under pressure from imperial authorities a sugar has been granted the Indians, and the Fiji Islands will be some more of an Asiatic colony than European. The Fiji Planters' Association has expressed itself as favoring the introduction of Chinese coolies instead of further Indian immigrants.
